3. Summary of all Valuation Properties

Certified Valuation Assessment

Fair Market Value: INR Rs 88,80,000 ()

Realizable Sale Value (85%): INR Rs 75,48,000 ()

Distress Sale Value (75%): INR Rs 66,60,000 ()

Insurable Value (Total Building Replacement Cost): INR Rs 35,00,000 ()

Assessed Government / Guideline Value: INR Rs 50,00,000 ()

The valuation of the properties mentioned above has been meticulously determined following a diligent exercise that considers numerous factors, including market trends, property conditions, and comparable transactions in the vicinity. This comprehensive approach ensures that the figures accurately reflect the current value of the assets. Below is a summary of the valuation:

4. Basis & Methodology of Valuation

1. Basis of Valuation

- This Valuation is based on the framework and guidelines provided in International Valuation Standards.
- The definition of Fair Market Value as per the International Valuation Standards is as under:
 - “Fair Market value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.”
 - Liquidation Value : As per businessdictionary.com is Selling price of an asset less the expenses incurred in the sales transaction, and in bringing the asset to the saleable state. It is the net money the bank is going to realize after spending expenses like the arrears in property tax, maintenance charge, legal charges, valuation charges, advertisement expenses, brokerage charges etc.

2. Approach and Methodology of Valuation:

3. Valuation of Land in this report

The Sales Comparison Method of Valuation under Market Approach is adopted in which due weightages have been given to factors such as:

- The Right to Sell / Transfer / Lease the Land.
- Demand and Prospective buyers for such type of plots of Industrial land.
- Shape, Size, Prominence and Location of Land.
- The Marketability, Utility, Demand and Supply of Residential, Commercial, Industrial land in the surrounding area.
- The Land rates as evident from the Sale Instances of comparable land found upon market enquiry.
- Legal and Physical Encumbrance on Land.
- Freehold or Leasehold nature of Land etc.

4. Valuation of Buildings in this Report:

- The replacement cost method is adopted for valuation of buildings in this report where cost of constructing a building with the same utility as the structure being evaluated, using the current construction materials, standards, designs, and layouts.

5. Sales Comparison Method:

Estimation of market value of Land:

We made market inquiries of Land that have been recently sold or are available for sale in the vicinity of the subject property to estimate capital value of the subject property. Our sources of market survey and enquiries include:

- Government employee of local authorities (Sub Registrar, etc.),
- Landlords,
- Real estate developers,
- Real estate agents, etc.

In order to estimate the market value of the subject property, premiums and discounts have been allocated to the comparable properties taking into consideration some of the parameters for comparison as prescribed by valuation standards. We have compared the subject property with the three comparable instances on the following parameters:

- Physical Attributes of the Site: The intrinsic physical features of a site—namely its size, shape, and frontage—are fundamental determinants of its market value. The land parcel's size dictates the spectrum of potential uses and development options available, with larger sites affording greater flexibility in design and functionality. A broad frontage enhances the property's accessibility and exposure, thereby improving its prominence and attractiveness for commercial and residential developments alike. The shape of the plot directly affects the efficiency of land utilization, influencing both the percentage of usable area and the overall development potential of the site.
- Connectivity & Accessibility: Connectivity and accessibility encapsulate the property's ease of access via various transportation networks and its integration within the broader urban framework. Properties boasting superior connectivity through established roads, public transport links, and supporting infrastructure consistently experience stronger market demand. Enhanced access translates to increased desirability, enabling such properties to command higher capital values and rental yields relative to less connected counterparts.
- Location & Neighbourhood: The location of a property is assessed based on a combination of its administrative context, proximity to major thoroughfares and central business districts, availability of social infrastructure, and the overall environment. The prevailing land uses and physical condition of neighboring properties significantly influence the tangible and perceived quality of the location. A balanced mix of surrounding uses and well-maintained adjacent properties can amplify the site's appeal and market value, whereas neglect or incompatible uses may detract from it. Assessing connectivity also

requires an evaluation of the quality of access, considering factors such as road width, surface condition, traffic density, and typical travel times. These considerations are critical, with their importance weighted according to the intended use of the property or proposed development.

- Age of the Property: The effective lifespan and value retention of a property are largely contingent on its age and ongoing maintenance. The building's age is a key parameter in determining its depreciated replacement cost and overall utility. Newer constructions generally possess a longer remaining service life, enhancing their attractiveness and marketability. Accordingly, the condition and age of the property are pivotal components in professional valuation assessment

6. Calculation of Depreciation in this report:

Depreciation – Straight Line Method :

Depreciation refers to the systematic allocation of the cost of a tangible asset over its useful life. It represents the gradual decline in the value of an asset due to wear and tear, obsolescence, or passage of time. For the purpose of this report, depreciation has been calculated using the Straight Line Method (SLM), which is one of the most widely accepted and straightforward methods of computing depreciation.

1. Straight Line Method – Overview

Under the Straight Line Method, the depreciation expense is uniformly spread over the useful life of the asset. The formula used is:

$$\text{Annual Depreciation} = (\text{Cost of Asset} - \text{Salvage Value}) / \text{Useful Life}$$

Where:

- Cost of Asset is the total purchase cost including any directly attributable expenses to bring the asset to working condition.
- Salvage Value (also known as residual value) is the estimated value of the asset at the end of its useful life.
- Useful Life is the period over which the asset is expected to be used by the entity.

This method ensures equal depreciation expense every year and is particularly suitable for assets that provide consistent utility over their useful lives.

2. Consideration of 10% Salvage Value

In this report, a salvage value of 10% of the original cost has been considered for all depreciable assets. This implies that at the end of the asset's useful life, it is assumed that the asset will retain 10% of its original cost as residual value, and hence only 90% of the cost is depreciated over its useful life.

7.4. Analysis of Market Rate: Open Land

During the survey, there were limited transacted comparable instances in the catchment area of the subject site at Durgammagadda. Hence, we have considered the following comparable properties available/quoted for sale from the various sources of our enquiry:

Comparable 1 (C1): The comparable property C1 is located at Kissan Nagar, Karimnagar, approximately 2.2 km from the subject property. This open plot abuts a 25' wide road with north facing, having a saleable area of 128 sq.yd. and a quoted market rate of ₹35,154 per sq.yd. After applying necessary attribute adjustments such as discount negotiation (–15%), location (–5%), size adjustment (–50%), facing (+5%) and corner influence (+5%), the total adjustment worked out to –50%, resulting in an adjusted market rate of ₹17,577 per sq.yd.

Comparable 2 (C2): The comparable property C2 is located at Hussaini, Karimnagar, at a distance of about 1.3 km from the subject property, abutting a 25' wide road with south facing, a saleable area of 192.66 sq.yd. and a quoted rate of ₹28,028 per sq.yd. After considering discount negotiation (–15%), location (0%), size adjustment (–40%), facing (0%) and other applicable parameters, the total adjustment resulted in –55%, yielding an adjusted market rate of ₹12,613 per sq.yd.

Finally, based on the analysis of the above comparable properties, the analyzed average market value after adjustments works out to approximately ₹15,095 per sq.yd. Considering market trends, demand, and prudence, the fair market value of the subject property is reasonably adopted at ₹15,000 per sq.yd.

Comparative Appraisal Table – Open Land:

	Subject Property	Comparable I	Comparable II
Property location	Durgammagadda, Karimnagar	Kissan Nagar, Karimnagar	Hussaini, Karimnagar

Say		15,000	

7.5. Analysis of Market Rate 2: Under Construction Building:

During the survey, there were limited transacted comparable instances in the catchment area of the subject site at Durgammagadda. Hence, we have considered the following comparable commercial properties available/quoted for sale from the various sources of our enquiry:

Comparable 1 (C1): The comparable property C1 is located at Sarada Homes, Karimnagar, approximately 3.3 km from the subject property. This residential flat on the fourth floor with

new construction, having a saleable area of 1,620 sqft and a quoted market rate of Rs. 4,500 per sqft. After applying necessary attribute adjustments such as discount for negotiation (–10%), distance (–5%), building age (–3%), floor level (–2%), the total adjustment worked out to –20%, resulting in an adjusted market rate of Rs. 3,600 per sqft.

Comparable 2 (C2): The comparable property C2 is located at Vijaya Residency, Sapthagiri Colony, Karimnagar, at a distance of about 5 km from the subject property. This residential flat on the fourth floor in a 1-year old building, with a saleable area of 1,620 sqft and a quoted rate of Rs. 3,950 per sqft. After considering discount for negotiation (–10%), location (+5%), distance (+5%), building age (–5%), floor level (+2%), size difference (+5%) and other applicable parameters, the total adjustment resulted in +2%, yielding an adjusted market rate of Rs. 4,029 per sqft.

Finally, based on the analysis of the above comparable properties, the analyzed average market value after adjustments works out to approximately Rs. 3,815 per sqft. Considering market trends, demand, and prudence, the fair market value of the subject property is reasonably adopted at Rs. 3,800 per sqft.

Comparative Appraisal Table - Flats:

	Subject Property	Comparable I	Comparable II

8. Valuation – Steps to arrive at Correct Value

The following are the detailed steps followed to arrive at the correct value:

- Govt. Rate-from SRO or internet.
- Document writers where ever available.
- Nearby owners of similarly placed land
- Guidance from firmly value /valuers of the district.
- Information from the local land brokers
- Any important landmark decisions of government affecting the value of this land.
- Internet sites giving the realistic sale value of the lands in the village/vicinity.

9. Assumptions

- The authenticity of the documents provided was not checked and it is assumed that all the data provided to us is genuine.
- The valuation report is tempered by the exercise of our judicious discretion, taking into account the relevant factors affecting the value of the assets such as existing demand & supply dynamics of the Durgammagadda Village.
- This property is free from all encumbrances, easements and litigations
- It is assumed that no flat in this property is sold and all the property has a clear and transferable title.
- We consider that the valuation is both reasonable and defensible based on the information available and reasonable assumptions made. However, it may be noted that others may place a different value.
- The report assumes that the company/business/assets has complied fully with relevant laws and regulations applicable in its area of operations and usage unless otherwise stated.
- As is the general practice, the sale deeds are executed based on the govt rate and not the market rate, similar transactions are not found surrounding this property at the market rate. Hence the market value is arrived based on the inputs given by the real estate brokers in the area.
- The liquidation value arrived at discounts the fair value as a based on reasonable assumptions of this property.
 - a. The asset marketing factor,
 - b. Costs of brokerage & other selling expenses,
 - c. Negotiation factor & bargaining power of the acquirer (as the seller is compelled to sell) and
 - d. Potential investments (or lack of it) into the sector in the current scenario.

10.Caveats & Limitations

- The contents of this valuation report to a third party in any way without first obtaining our written approval to the form and context of the proposed disclosure. No decisions should be taken based on this report by any party other than our client.
- To the best of my knowledge and belief, the statements and opinions in this report are correct and the information provided by others is accurate. However, no responsibility is assumed for its accuracy, which should be checked by appropriate report, search or formal enquiry if required.
- No physical measurements of land were taken by us during the visit to the site.
- This valuation is based upon information reasonably available to the valuer as at the date of this valuation in accordance with usual valuation practices.
- Our report is based on the assumption that there are no legal issues on the property.
- This valuation is current as at the date of valuation only. The value assessed herein may change significantly and unexpectedly over a relatively short period (including as a result of general market movements or factors specific to the particular property).
- I/ We do not accept liability for losses arising from such subsequent changes in value. Without limiting the generality of the above comment I/ we do not assume any responsibility or accept any liability where this valuation is relied upon after the expiration of three months from the date of valuation, or such earlier date if you become aware of any factors that have any effect on this valuation.
- Confirmation on authenticity of ownership of the property through its original Documents is not in the scope and purview of our valuation report.
- We are not responsible for any incidental or consequential actions or any Loss Occurred to anybody, on any false declaration claim or deposition made by the applicant.
- Although every scientific method has been employed in systematically arriving at the value, there is no indisputable single value and the estimate of the value is normally expressed as falling within a likely range. To comply with the RP's request, I have provided a single value for the overall Liquidation Value and Fair Value of the assets of the CD, derived as an arithmetic average of the range of Liquidation and Fair Values.
- The actual market price achieved may be higher or lower than our estimate of value depending upon the circumstances of the transaction (for example the competitive bidding environment of the resolution plans), the nature of the business. The knowledge, negotiating ability and motivation of the buyers and sellers will also affect actual market price achieved. Accordingly, our valuation conclusion will not necessarily be the price at which actual transaction will take place.
- We relied on some data from external sources. These sources are considered to be reliable and therefore, I assume no liability for the truth or accuracy of any data, opinions or estimates furnished by others that have been used in this analysis. Where I have relied on data, opinions or estimates from external sources, reasonable care has been taken to ensure the accuracy of

such data and that such data has been accurately and correctly extracted from those sources and /or reproduced in its proper form and context.

- The company and its management/representatives warranted to us that the information they supplied was complete, accurate and true and correct to the best of their knowledge. We have relied upon the representations of the owners/clients, their management and other third parties concerning the operational data and maintenance schedule of all buildings, except as specifically stated to the contrary in the report. In no event shall we be liable for any loss, damages, cost or expenses arising any way from fraudulent acts, misrepresentations, or willful default on part of the companies, their directors, employee or agents.
- I am fully aware that based on the opinion of value expressed in this report, I may be required to give testimony or attend court / judicial proceedings with regard to the subject assets, although it is out of scope of the assignment, unless specific arrangements to do so have been made in advance, or as otherwise required by law. In such event, the party seeking my evidence in the proceedings shall bear the cost/professional fee of attending court / judicial proceedings and my tendering evidence before such authority shall be under the applicable laws.
- It should be noted that Liquidation Value could be significantly different from Fair Value or fair market value. Further, Liquidation Value in an orderly sale can be very different from Liquidation Value in a fair sale transaction and Liquidation Value of any individual asset on a standalone basis could be very different from Liquidation Value of any individual asset as a whole. As such, the premise of Liquidation Value for the said purpose in this report is orderly Liquidation Value of the assets in-situ and on a going- concern basis.
